Projects

LANG MASTER (Team Project- Mernstack) [Live link](#) | github> [client link](#) | [server link](#)

Technologies: tailwind CSS, react, typescript, firebase, node.js, express.js, and MongoDB

- This website is for learning English where users can learn English.
- On this site, we have locked units except the first one which includes so many different types of English questions. After finishing one next will be unlocked one by one and get coins.
- We can buy books with coins and if we complete all the units, get a certificate.

Do yoga (MernStack project) [Live link](#) | github> [client link](#) | [server link](#)

Technologies: HTML, CSS, javascript, tailwind CSS, reactjs,node.js, express.js, and MongoDB

- This is a site for online yoga classes. This site can accessed by the admin, instructor, student, and visitor without authentication but the role is different for each user.
- Students can add classes to the cart and then enroll and see the list of enrolled classes.
- Instructors can add classes after approved by the admin and also can get feedback from the admin.

Doctor Care (Front-End Project) [live link](#) | github> [client link](#)

Technologies: HTML, CSS, javascript, tailwind CSS, reactjs,node.js, express.js, firebase

- This site is for getting information about doctors and services.
- There is a private route, if anyone clicks on the doctor's route he/she will be redirected to the login page.
- After logging in or signing up, they can access that route and get doctor's information and their services.
